Muhammad Subhan Shahid

Aspiring AI / Machine Learning Engineer
Lahore, Pakistan

+92 317 4103599 | subhanshahid1501@gmail.com | github.com/subhans1501

SUMMARY

AI-focused Artificial Intelligence undergraduate with hands-on experience in machine learning, NLP, and model deployment. Skilled in transformer architectures, reinforcement learning, and automating ML pipelines. Proven ability to design end-to-end AI systems and lead complex university projects. Actively seeking AI/ML internships and FYP opportunities.

EDUCATION

National University of Computer and Emerging Sciences Aug 2023 – Present
Bachelors in Artificial Intelligence

Unique College, Lahore *2021 - 2023*
Intermediate in Computer Science (ICS)

Unique School, Lahore *2019 - 2021*
Matriculation in Computer Science

TECHNICAL SKILLS

- **AI / ML:** NLP, Reinforcement Learning, Neural Architecture Search, MLOps, LLMs, Prompt Engineering
- **Frameworks:** MLflow, Gradio, Streamlit, PyTorch, TensorFlow, Hugging Face, Scikit-learn
- **Programming:** Python, C, C++, SQL
- **Tools:** Git, GitHub, Linux, Makefiles, VS Code

PROJECTS

Neural Architecture Search (Final Year Project)

- Leading a team to research and develop an automated AI architecture system.
- Preprocessed 500+ annotated medical documents using embedding techniques to improve search relevance and generative model quality.

Fake Face (Deepfake) Detection System

- Developed a computer vision model utilizing Convolutional Neural Networks (CNNs) to accurately distinguish between real and AI-generated human faces.
- Preprocessed image datasets and optimized model weights to achieve high classification accuracy in identifying deepfake artifacts.

Fake News Detection System

- Built a classification pipeline using transformer models (BERT, RoBERTa, DistilBERT) to process and detect fabricated news.
- Fine-tuned models on custom datasets to generate high-accuracy classifications.

Text Summarization using Encoder-Decoder Models (BART, T5)

- Implemented abstractive text summarization using Transformer-based encoder-decoder architectures.
- Processed the arXiv dataset on Kaggle to generate concise and coherent summaries.

Phishing Email Detection & Deployment

- Trained and evaluated Logistic Regression, FNN, RNN, and LSTM models for accurately identifying phishing emails.
- Deployed the highest-performing NLP model through an interactive Gradio/Streamlit user interface.

MLOps Pipeline Automation

- Automated machine learning workflows utilizing Makefiles and Git version control for efficient model deployment.
- Tracked experiment metrics and evaluated model performance using MLflow for an Iris classification model.

Transport Management System

- Developed a C++ application with optimized route planning and vehicle tracking algorithms.

Hospital Management System

- Built a C#, .NET, and Oracle-based system for patient, appointment, and billing management.

Multiplayer Chess Game

- Implemented a real-time multiplayer chess game using socket programming with synchronized game states.

SKILLS

- **AI & Machine Learning:** NLP, Computer Vision, Reinforcement Learning, Neural Architecture Search, MLOps, LLMs.
- **Frameworks & Tools:** MLflow, Gradio, Streamlit, PyTorch, TensorFlow, Hugging Face, Git, GitHub.
- **Programming Languages:** Python, C, C++, SQL.

INTERESTS

- Agentic AI, Machine Learning Research, Autonomous Systems, Reinforcement Learning.
